|--|--|
| | |
| This information is invaluable for the de development activities in the country. The | formation on the status of R&D effort and activities in South Africa. evelopment of policy and programmes in support of research and e principal users of the information will be businesses, government, ment, researchers, and national, regional and international research |
| | Sciences Research Council (HSRC) on behalf of the Department of dly request your co-operation by completing and returning this form |

CONFIDENTIALITY

All information gathered by this survey will be held in the strictest confidence. Under no circumstances will either the HSRC or DST or any organisation associated with this survey publish, release, or disclose any information on, or identifiable with, individual companies, business units or R&D units.

DUE DATE

Please complete and return this form to us electronically or in the enclosed addressed envelope, or to 2902 National R&D Survey, HSRC, Private Bag X9182, Cape Town, 8000 no later than 8 November 2002.

HELP AVAILABLE

We have enclosed a User Guide in this pack to assist you in providing the necessary information, and we request that you refer to it before and during the completion of the form. If you have any additional problems in completing this form and/or in meeting the due date, please do not hesitate to contact the following survey managers for assistance:

| Name Contact Number | E-mail |
|-------------------------------|---------------------|
| Hilton Trollip (021) 467-4485 | RDSurvey@hsrc.ac.ze |

Dr. Michael Kahn

Executive Director: Knowledge Management

Human Sciences Research Council

Person completing this form and whom we should contact if any queries arise regarding this form:

| Name | | () | |
|-------------|------|----------|--|
| Designation | | Fax: () | |
| | Date | Cell | |
| Signature | | E-mail: | |

WE THANK YOU FOR YOUR CO-OPERATION

IMPORTANT NOTES (Please read before proceeding)

- This survey requires some degree of effort on your part. Kindly ensure all information provided is as accurate as possible. If exact figures are not available please provide carefully considered estimates.
- Survey data will enable benchmarking of R&D within South Africa and/or comparisons internationally. This is vital to ensuring that South Africa remains both competitive in the development of new products & services, and proficient in the advancement of knowledge.
- The consolidated information that you gather will be of value to your own organisation. At a later stage we will feedback aggregated information that should assist you in benchmarking your own company.
- Compulsory reporting and mandatory sample auditing of this information will soon be necessary given that this survey will become part of Official Statistics. We trust that you will consider the submission of this questionnanc as preparation for the regular submission of this information in the future.

WHAT IS IN THIS QUESTIONNAIRE?

- This survey follows the approach of the Organisation for Economic Co-operation and Development (OECD) and is a standardised survey to measure INPUTS into the R&D system ONLY, In no way does this survey attempt to measure the outputs/results/success of R&D.
- Should you wish to provide information on outputs please do so at the end of this form in the space for comments (PART 7).
- This survey asks for information on:

FINANCIAL INPUTS

PART 1:

i.c. expenditure on R&D (as defined).

HUMAN RESOURCE INPUTS i.e. personnel headcount and time spent on R&D (as defined).

General organisation information. Please complete whether or not your organisation/unit does R&D.

- The questionnaire is organised as follows:
 - PART 2: In-house R&D expenditure.

 - PART 3: R&D outsourced / contracted out within South Africa.
 - R&D outsourced / contracted out outside South Africa. PART 4:
 - PART 5: R&D Personnel (in-house only).
 - PART 6: R&D Personnel turnover.

KEY DEFINITIONS AND CONVENTIONS

- Please report all expenditure items in this survey exclusive of Value Added Tax (excl. VAT).
- Please round all monetary values to thousands of Rands (R'000).
- The financial year for this survey for the government and science council sectors is defined as the year starting. 1 April 2001 and ending on 31 March 2002. However, please report on the most recent complete financial year for which your organisation has data. Please indicate the start and end of your financial year in the appropriate section, and report figures for that year,
- · Figures reported should relate to expenditure incurred during the financial year, whether paid or not, and to income carned thiring the year, whether received or not.
- This survey provides guides in text boxes to assist in defining important concepts and terms. The items listed under Including and Excluding in text boxes should not be taken as a complete list of items to be included or excluded. Please refer to the User Guide if necessary and/or contact a survey manager.

WHAT IS R&D?

Definitions

This survey follows the approach of the Organisation for Economic Co-operation and Development (OECD), which defines Research and Experimental Development (R&D) as creative work undertaken on a systematic basis in order to increase the stock of knowledge, including knowledge of humanity, culture and society, and the use of this stock of knowledge to devise new applications.

The basic criterion for distinguishing R&D from related activities is the presence in R&D of an appreciable element of novelty and the resolution of scientific and/or technological uncertainty, i.e. when the solution to a problem is not readily apparent to someone familiar with the basic stock of community used knowledge and techniques in the area concerned.

What is business R&D?

- The R&D performed by businesses is generally
 investigative work that is of actual or potential use in
 the development of new or enhanced materials,
 products, devices, processes or services.
- R&D directed towards duplicating work already developed by others should only be included if the knowledge or technology required for development is not available to this organisation.

What does R&D include and exclude?

- R&D includes but is not limited to:
- Design, construction and operation of prototypes where the main objective is technical testing or to make further improvements
- Construction and operation of pilot plants not operated or intended to be operated as commercial units
- Research and development of new computer software or substantial modifications to existing computer software. This includes developments which lead to technological or scientific advances in:
 - theoretical computer sciences;
 - operating systems e.g. improvement in resource or interface management, a truly new operating system or the conversion of an operating system to a significantly different hardware environment, programming languages e.g. new languages, significant extension of an existing language or a new or a significantly different language translator, applications, if a significant technological step forward is achieved.
- "Feedback R&D" directed at solving problems occurring beyond the original R&D phase, for example technical problems arising during initial production runs.
- Research work in the biological, physical and social sciences, and the humanities.
- Social science research includes economic, cultural, educational, psychological and sociological research

Where does R&D End?

R&D ends when the work is no longer experimental and pre-production begins.

If the primary objective is to make further technical improvements on the product or process, then the work falls within the definition of R&D.

If, however, the product, process or approach is substantially set and the primary objective is to develop markets, to do pre-production planning, or to get a production or control system working smoothly, then the work is no longer considered R&D.

R&D excludes:

(except where used primarily for the support of, or as part of, R&D projects):

- Scientific and technical information services.
- Policy related studies, management studies, efficiency studies.
- Consumer surveys, advertising, market research.
- Routine quality control and testing.
- Pre-production activities such as demonstration of commercial viability, tooling up and trial production runs
- Prospecting, exploring or drilling for minerals, petroleum or natural gas.
- Cosmetic modifications or style changes to existing products.
- General purpose or rounne data collection.
- Routine computer programming, systems maintenance or software application.
- Operations research and mathematical or statistical analysis.
- Commercial, legal and administrative aspects of patenting, copyrighting or licensing activities.
- Activities associated with standards compliance.
- Specialised routine medical care, for example routine pathology services:

NB! Please also refer to the User Guide enclosed with this questionnaire.

| /. | Did this organisation | on/unit perform any R&D during the financial year 2001/2002? |
|----|-----------------------|---|
| | | Please answer Question 8 and onwards. Please proceed to Question 15 on Page 9 and onwards. |

- Please complete the headcount, average % time spent on R&D and average labour cost per person in terms of the three categories of personnel involved in R&D for the financial year 2001/2002.
- Please report for all personnel, whether South African or non-South African, i.e. the totals below must correlate
 with the totals for Question 22 & Question 23 (South African & non-South African) combined
- If your enterprise has actual labour costs spent on R&D during 2001/2002 in a readily accessible form, then it is
 not necessary to fill in the table below. Instead the figure can be reported directly in Question 10.
- Please refer to the User Guide for definitions of personnel categories.

| Personnel Categories | Number of persons involved in R&D (A) | Average % time spent on R&D act- lvities in 2001/2002 (B) | Average labour cost per person fu 2001/2002 (C) | Calculated labour cost of R&D (AxBxC/100) |

10. Please specify the percentage of total R&D expenditure (reported in Question 9) which was directed towards the following types of R&D activities. (Please refer to the User Guide for definitions and examples.)

Pure Basic Research

- Experimental of theoretical work undertaken primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts, without a specific application in view.
- Work carried out without looking for long-term economic or social benefits other than the advancement of knowledge.
- The analysis of properties, structures, and relationships with a view to formulating and testing hypotheses, theories or laws.
- The results of basic research are not generally sold but are usually published in scientific
 journals or circulated amongst interested colleagues.
- Humanities R&D would normally involve this type of research.

| Per | cent | ige |
|-----|------|-----|
| | | |

Strategic Basic Research

- Basic research directed into specific broad areas in expectation of useful discoveries.
- Basic research providing the broad base of knowledge necessary for the solution of recognised practical problems

| Perc | entage |
|------|--------|
| | |

Applied Research

- Original investigation undertaken to
 - acquire new knowledge with a specific aim or application in view;
 - determine the possible uses for the findings of basic research;
 - determine new methods or ways of achieving specific and pre-determined objectives.
- The results of applied research are intended primarily to be vatid for a single of limited number of products, operations, methods, or systems.
- Applied research develops ideas into operational form.
- The knowledge or information derived from it is often patented but may also be kept secret.

| l | Per | cent | age |
|---|-----|------|-----|
| ſ | | | |

Experimental Development

Systematic work using existing knowledge gained from research and/or practical experience
for the purpose of creating new or improved materials, products, processes or services.

(to agree with Question 9)

13. Please classify your R&D activities according to the most appropriate Research Fields (RF) code (please refer to User Guide) and indicate the percentage of R&D expenditure associated with each of these.

- The RF Codes are based on recognised academic disciplines and emerging area of study.
- More than one RF code may be provided, together with an associated percentage split.
- The classification of R&D using RF codes is a generally accepted convention internationally.

| | RF Codes | | | | | |

14. Please classify your R&D expenditure according to the most appropriate group code of Socio-Economic Objective (SEO) (Please refer to User Guide) and indicate the associated percentage split.

- The SEO classification provides an indication of the sector of the national economy which will be the main beneficiary of the R&D you are practising.
- More than one SEO code may be provided, together with an associated percentage split.
- The classification of R&D using SEO codes is a generally accepted convention internationally.

PART 5: R&D PERSONNEL (IN-HOUSE ONLY)

- Please report for all personnel for whom this organisation/unit pays payroll tax.
- The group classification in the tables below accords with the principles of employment equity legislation.

The following notes should be used to determine the allocation of personnel:

Researchers

- Personnel working on the conception and/or creation of new knowledge/products.
- Executives and directors involved in the planning or management of scientific and technical aspects of R&D projects.
 Excluding
- Managers and directors concerned primarily with budgets and human resources, rather than project content.

Technicians directly supporting R&D

- Persons doing technical tasks in support of R&D, normally under the direction and supervision of a researcher.
- Typical activities include preparation for experiments, taking records, preparation of charts and graphs and coding data.

Other personnel directly supporting R&D

- Skilled and unskilled artisans.
- Secretarial, administrative and clerical personnel working on, or directly associated with, R&D activity.
- Executives and directors concerned primarily with budgets and human resources, rather than project content.
- Personnet working in, or supporting, library and information services.
- 22. Please report headcount and % time spent on R&D for **South African personnel** involved in R&D for the financial year 2001/2002 according to the categories below. This includes personnel born in South Africa, naturalised citizens and those with South African residency status.
